

## MySite Builder Web Part

A new Powerful Tool to create, deploy and administer the 'My Sites' setup of Microsoft® Office SharePoint 2007.

The main feature is to let the server administrator create and deploy total preconfigured MySite templates which can be configured separately for any Windows/AD group(s).

### Features

Using **MySite Builder** you will be able to:

- Choose between pre-made templates for the placement of items on MySite (the page area is shown in different combinations e.g. left / middle/right column).
- Select Web Parts, existing lists and libraries to add to the MySite page.
- Configure the selected items
- Configure MS Outlook Web Parts based on Users email from Active Directory.
- Configure MS Outlook Web Parts with MS Exchange mail server address.
- Use SharePointDesigner for new designs.
- Deploy templates to MySites controlled by AD.

### The installation of **MySite Builder**

Installation of MSB is extremely easy and is done in the SharePoint Central Administration by your SharePoint Administrator.

### So why do you need **MySite Builder**?

The configuration of 'My Site' Web Parts at present is most likely done either by your user's themselves with all the associated problems or by an overworked SharePoint Administrator!  
How many support calls do you get from users

who are not able to configure even the simplest of Web Parts, how many can not see their e-mails and are too embarrassed to ask? There are many reasons why Web Parts do not work from simple misspellings of Mail Servers to Users having closed a Web Part without knowing how to bring it back again possibly missing out on vital information.

**MySite Builder** will save your SharePoint Administrator countless hours by being able to configure all the MySites from **MySite Builder** whether new or existing and will also reduce the amount of time your SharePoint Administrator is supporting your users.

### Custom development

ElearningForce Ltd is able to provide you with custom development for Web Parts for the Microsoft SharePoint 2007 Server. Please contact us for more information.

### System requirements

Microsoft® Office SharePoint Server 2007 Service account of the Administrator web site must have access to all MySites webs when using 'Apply template' to existing MySites on Server farms.
